Characteristics of the weapon mandate more than one line for information, usually because of two different operating modes or calibers.

Exact values were not available so approximate values were used to allow calculating of game stats, SPEED and RECOIL.

**COST:** Real world "suggested retail" cost of the weapon, at or near the DATE when possible. Sorry to say this column is poorly supported and will be a focus for future improvement.

**NAME:** Manufacturer's model name when available, then NATO nomenclature and commonly accepted American name as a last resort. Nicknames are included only when more commonly used than the original model name. With pre-1900 firearms, it is not uncommon for the currently accepted name to be different from original and I have used current names (for example Colt never referred to any of their revolvers as Army or Navy Models).

**TYPE:** Basic, almost generic and often ill defined, terms to describe the weapon. I have kept this basic and left out terms like carbine, assault rifle and battle rifle, feeling they would cause confusion rather than supply useful information.

**SKILL:** Character skill used for firing weapon; Smallarm, Longarm and/or Autofire. Here I break with book ME rules and define the difference between longarm and smallarm as how the weapon is used rather than the type of ammunition used. For traditional ME rules, all SMG would be S or S/A rather than L and L/A.

**IA:** Inherent Accuracy of weapon, including all listed characteristics including any fitted optical sight.

**SPEED:** Speed of weapon, including all listed accessories, for calculating Initiative.

turn. For burst weapons, assume 2-three-round bursts per turn. For weapons with a ROF below one, there is a mandatory one or more turn gap between shots as the action is worked to chamber the next round.

**RECOIL:** Successive shot penalty for semiauto / burst / full-auto fire. Used in place of the standard -15/-30 of the rulebook. Numbers are based on weight, energy of round fired and ROF of each particular weapon.

**RANGE:** As there is no standardized definition of "effective" range, I have based these numbers on a reasonable chance of obtaining hits on a human sized target under realistic conditions. Feel free to adjust them to suit your needs or beliefs.

5,000,000), A (5,000,001+)

**HANDS:** Number of hands generally required to operate the weapon; 1-hand (1), 2-hands (2), 2-hands plus shoulder stock (2s), 2-hands and bipod (2b), 2-hands and tripod (2t). Refer to combat rules for using a weapon other than as listed.

**WEIGHT:** Weight of the weapon (kg), including all listed accessories and full ammo load (except for belted ammo).

**CALIBER:** Standard caliber of weapon, expressed in most common name (thus mix of standard and metric).

**CAPACITY:** Capacity of standard ammunition feed device. Most common listed first, with options in parenthesis.

**RELOAD:** The number of turns it takes to completely reload the weapon, taking into account ready access to ammunition and normal conditions.

**SIGHT:** The portion of the IA number derived from the iron sights of the weapon. For use in recalculating IA as sighting systems are changed.

**SCOPE:** Some weapons come standard with a optical sight/scope. Refer to Scope Document for particulars on each sight model.

**DATE:** The date at which the weapon entered production and typically began available. With most models, prototypes could be available several years earlier.

**NOTES:** Accessories, features and additional information particular to each model. Refer to the following list.

A	Antique shotguns can not handle the pressure of modern high-power shells available, generally those made pre-1920. Use only period loads listed on the Ammo List.
B	Bulppup configuration in which the action and center of gravity are mounted behind the handgrip
C	Fitted with a bipod
D	Pistols are fairly concealable by nature, but some are better or worse than others. Assigning bonuses or penalties to detection attempts to spot concealed weapons would be appropriate, though no rules as yet exist. Weapons other than pistols would be D- at best.
	D+: Harder to detect due to small size.

	<b>D-:</b> Easier to detect do to large size.
E	Contrary to movies miniguns cannot be fired cannot be fired hand held. They require an external power source. Rate of Fire can be adjusted up to the maximum listed. The listed weight is for the weapon alone, ammo and power source are extra.
F	Fitted with a folding or collapsing stock. If fired with the stock folded/retracted a -5 IA is appropriate.
G	No stock fitted, pistol grips only, intended for for tripod or fixed mount. Generally impossible to safely fire unless so mounted.
H	Reduced Damage do to shorter barrel length and loss of muzzle velocity versus what is typical for that cartridge. The number after the H represents the reductions,
I	Poor quality construction causing a reduction in IA (and reliability if such rules are used). This is already factored into the presented IA number. <b>I1:</b> -1 IA do to quality <b>I2:</b> -2 IA do to quality <b>I3:</b> -3 IA do to quality
J	Many are produced as semiauto only, (ROF 4)
K	The weapon can be folded into a smaller non-firing form, which might not look like a weapon
L	Ammo is held in clips, usually 3-round, but sometime full 5- or 6-round (full moon clips), which results in faster loading. Clips should be considered fragile and if damaged will generally prevent weapons from functioning. Unless the weapon is chambered
M	STANAG magazine compatible (uses the same magazine as the M16)
N	Fitted with Muzzle Compnsator, which results in reduced felt recoil
O	Oddball notes that generally apply only to a handfull of weapons <b>O1:</b> Has a knife blade (9-11-inches) mounted below the barrel. <b>O2:</b> The weapon includes a knife blade, with the barrel(s) mounted in the handle and firing along the side of the blade. <b>O3:</b> Manual action has to be hand cycled between every shot <b>O4:</b> Calibers can be changed simply by changing the barrels. <b>O5:</b> removable cylinder, allowing for one turn reloading. <b>O6:</b> Hinged frame, usually top break <b>O7:</b> Reverse pump action, forward-rear rather than rear-forward. <b>O8:</b> Radial palm pistols are squeezed fired, have a radial cylinder where the bullets point outwards like spokes on a wheel, and basically have no sights. <b>O9:</b> Comes standard with a low quality laser sight (benefits only within 20m)
P	Fitted with a Picatinney sight rail that makes it easier to mount various optical sights.
Q	Near silent firing through the use of special ammunition which uses a piston system that contains all propellant gasses within the cartridge case.
R	Fitted with one or more accessory rails, either integral to the weapon or as part of a rail system that facilitate easier mounting of accessories like lights, lasers, handles.
S	Fitted with an integral noise suppressor
T	Fitted with a tactical light as standard
U	Designed for underwater use. Listed ranges are for firing in air. Underwater, use the following ranges. P11 ZUB: 5m deep, 15m; 20m deep 10m APS: 5m deep, 30m; 20m deep, 20m; 40m deep, 11m SPP-1M: 5m deep, 17m; 20m deep, 11m; 40m deep, 6m
V	Various calibers available either through order or O4 above. <b>V1:</b> 9mm, .32H&R, .45 Colt, .357 Mag, .40 S&W, .45 acp, .44 Mag <b>V2:</b> 26 calibers ranging from .22 WMR to .45-70. Weight ranges from 0.2 to 0.4, with smaller calibers being heavier <b>V3:</b> .22 WMR, .357 Mag, 9mm, .40 S&W. Weight ranges from 0.2 to 0.4, with smaller calibers being heavier

**V4:** .22 LR, ..2 Mag, .25 acp, .32 acp, .38 Spl, 9mm

**V5:** .22-250, .243, 7.62mm

**V6:** Virtually any caliber up to .30, including custom.

**V7:** Virtually any caliber including custom.

**V8:** 5.56mm, .22-250, .243, 7mm-08, 7.62mm

**V9:** Can chamber, fire and extract almost any cartridge using 9mm, .357 or .38 caliber.

**V10:** Calibers can be changed by changing the bolt group and include 9x17, 9x18, 9x19, 9x21, and 9x30. Effective range is dependent on caliber 150m (9x17, 9x18), 175m (9x19,9x21) and 200m (9x30). Weight runs from 2.41-2.7kg.

**V11:** Can chamber and fire any of the following: 9x18, 9mm, 9x23, 9mm Largo, .380, .38 Super, .38 S&W, and .357 Mag

**V12:** The small frame is available in .22 LR (22), .22 WMR (22M), .32 H&R (32) and .32-20 (3220). The medium frame is available in .41 mag (41), .44 mag (44), .45 Colt (45) and .357 mag (360). The super frame is available in .357 Super Mag (40), .414 Super mag (414), and .445 Super Mag (445)

W	Fitted with a visible light laser as standard
X	Takedown - The weapon can be disassembled, usually in a non-firing configuration, for transport and storage
Y	Replica of an period weapon, usually capable of firing modern ammunition. Most are Italian made.
Z	Restricted availability, Class-3 license required in the USA

#### Recommended Resource - Books

Standard Catalog of Firearms by Ned Schwing - Massive tome with basic information and photos of most civilian weapons sold in the US since 1850

Standard Catalog of Military Firearms by Ned Schwing - Basic information and photos of most firearms in official military use after 1870.

Cartridges of the World by Frank C Barnes - Outside of early European rimfires, this book covers most metallic cased cartridges.

#### Recommended Resource - online

Securityarms.com - lots of pictures and a little information

Google - Search by make or model, will usually at least produce a picture. Specs are usually much harder to come by.

Unlike weapons, which are model specific, ammunition is kept to generic loadings. There just is not enough difference between different companies' loadings of a particular caliber and type of bullet. Whenever possible, numbers were developed using data from my own ballistic testing or published third party tests, rather than manufacturer's data, which is usually generated using extremely long test barrels and not actual firearms.

## Delivered Damage

for suppressed use. If the second value is ~, then there is no available information on suppressed loads, either don't allow them or reduce the normal damage

### Bullet Types

**Ball, Tracer** and **Armor Piercing** use standard ME rules.

**Hollowpoints** use standard ME rules for Anti-Personnel ammunition.

**Prefragmented** (Glaser) use standard ME rules for Anti-Personnel ammunition.

**Matchking HP** are treated as normal hollowpoints except the price would be x2.

**VLD Ball** is treated as standard ball ammunition except price would be x5.

**Multipurpose** uses the ME rules for AET ammunition, except there is no magical bullet design, simply an armored penetrator and explosive element.

**Darts** do puncture damage rather than hydrostatic shock as noted under **F** below

**Slugs** are resolved just like normal bullets of the various types.

**Buckshot** is resolved just like ball ammunition, but these numbers are designed to be used in conjunction with Scott Levy's overlay system.

reasonable level we deal with birdshot in multiple pellet clusters. Resolve the number of clusters just like buckshot using the first damage value. Then rotate the

**Special Notes** on the 12guage 44.45mm ammo. Using a shotgun overlay, the four #1 buckshot pellets should be the inner most impact points.

### NOTES

B	Blackpowder: This load uses blackpowder, generating a large muzzle plume. Modern smokeless powders not generally safe in period weapons.
F	These flechette-like projectiles do Puncture rather than Hydro Shock damage. Reduce damage by 1 when used underwater.
G	In addition to the listed damage to the target, surrounding targets are affected by fragmentation effects similar to a mini-fragmentation grenade
H	maintained.
L	Lighter Load - reduce the listed recoil number of the weapon by 1
M	Modern: This load is made using modern components for a period cartridge and may not be safe to use in period weapons.
P	Period: These listings can also be found in pre-1910 blackpowder loads. Reduce damage and recoil by 1 (combines with light load reduction).
R	Rimfire: Non-reloadable cartridges that do not use an independent primer.
S	These loads use a pistol-system that contains all propellant gas within the cartridge and are treated as suppressed.
W	Wildcat: This is not a factory cartridge, requiring the case to be reshaped and the bullet handloaded
X	Experimental or rare.
